VISTA *Atelier*

A place where artistic vision meets **CAD** expertise

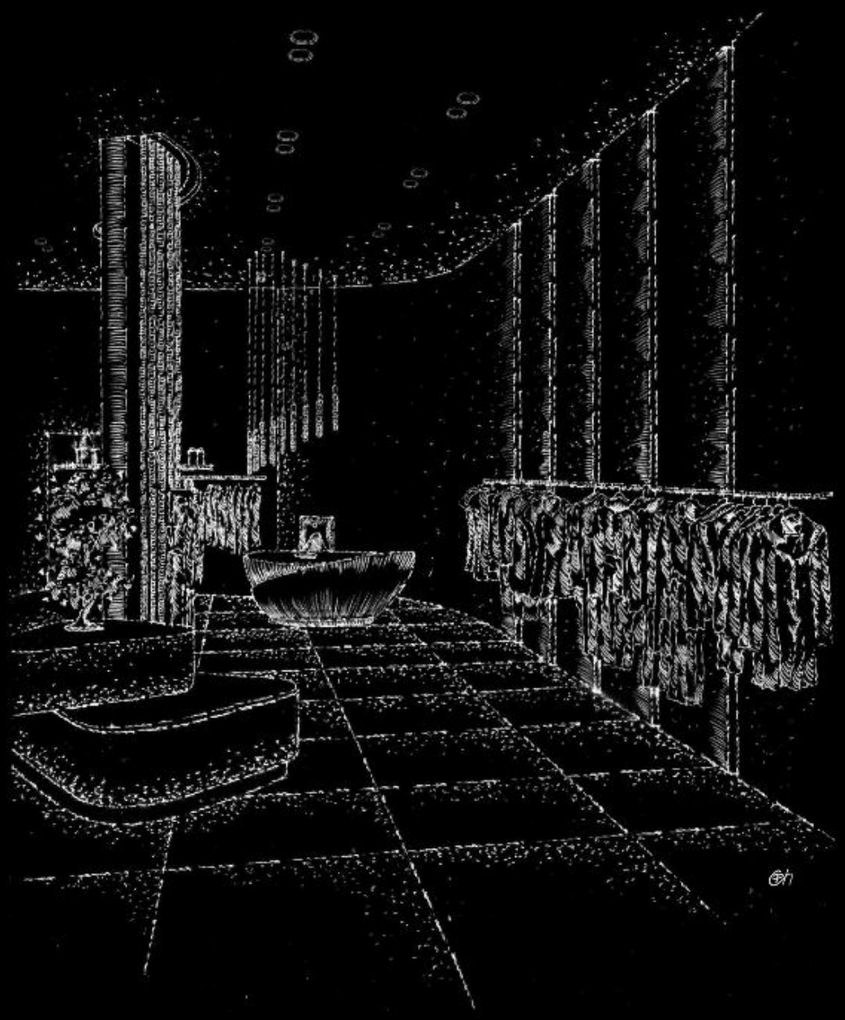

PORTFOLIO – Piotr Chilik

London-based Architectural CAD Designer, Visualisation Specialist and Hand Drawing Artist, specialising in planning drawings, lighting visualisations, glow plans, AI-assisted CGIs, DIALux calculations and joinery technical drawings.

Table of Contents:

- Qualifications [Page 3]
- Hand Sketches, Lighting Visuals & CGIs [Pages 4–21]
- Architectural Visualisations [Pages 22–36]
- Planning and Construction Drawings [Pages 37–53]
- Glow Plans [Pages 54–56]
- Lighting Plans [Pages 57–59]
- Lux Level Calculations [Pages 60–61]
- Joinery Technical Drawings [Pages 62–65]

CRACOW UNIVERSITY OF TECHNOLOGY

Department of Architecture

DIPLOMA

Mr./~~Ms.~~ **Piotr Chilik**

(name)

born on March 3, 1976

in Rymanów

completed the M. Sc. higher education studies in the field of Architecture and Urban Design

specialization of -

with the overall grade: **very good** and on Jan. 20, 2003 was granted the title of

Master of Sciences

(an official seal)

Dean
prof. zw. dr hab. inż. arch. W. Seruga

Rector
prof. zw. dr hab. inż. M. Chrzanowski

Cracow (name of the city) Date April 11, 2003

TADEUSZ KOŚCIUSZKO CRACOW UNIVERSITY OF TECHNOLOGY

FACULTY OF ARCHITECTURE

MASTER OF SCIENCE DIPLOMA IN ARCHITECTURE

Mr/Mrs

Piotr Chilik

Born March 3, 1976 in Rymanów

completed the five-year full time Master`s Degree Program in the field of Architecture and Urban Design

was granted on

January 20, 2003

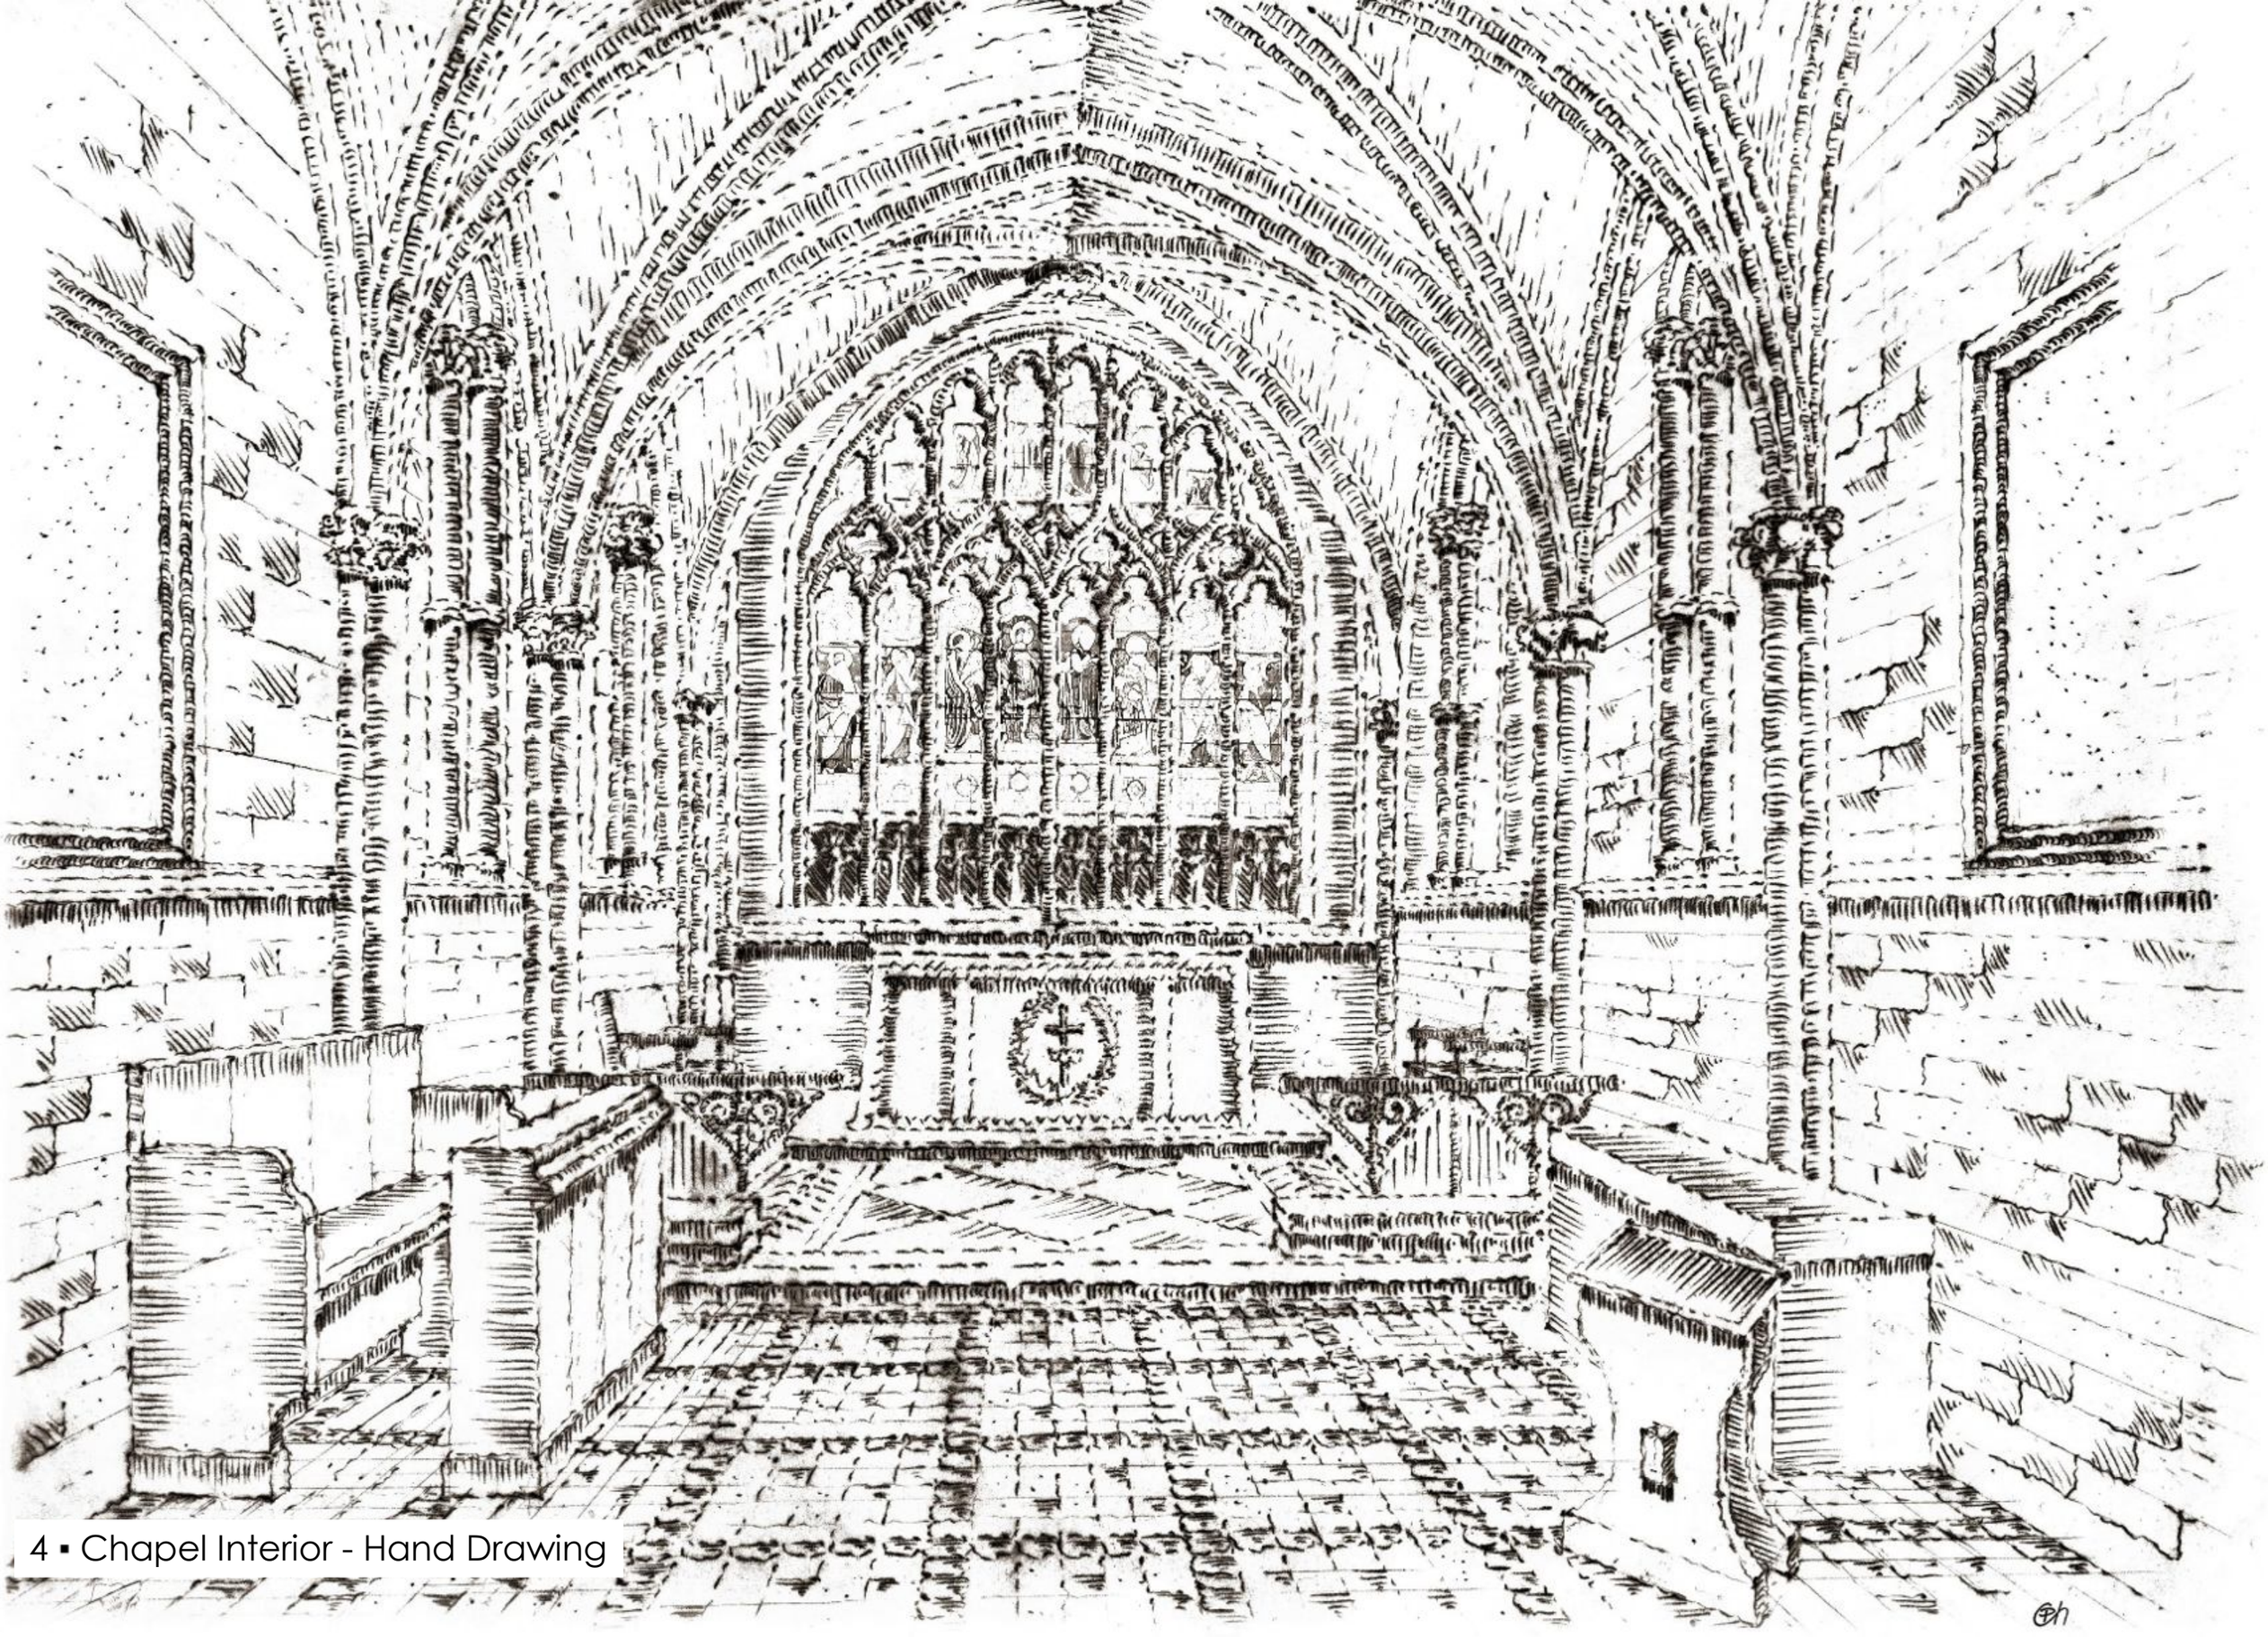

the title of Master of Science (Architect)

no 4741/A/794 (diploma number)

The 5 year full time programme leading to the title Master of Science (Architect) with a specialisation in Architecture and Urban Design is recognised by the Royal Institute of British Architects as giving exemption from Parts 1 and 2 of the RIBA Examination in Architecture.
The above validation refers to all the students graduating from the Faculty of Architecture of the Cracow University of Technology in the period from November 1999 until May 2005.

DEAN

IMPORTANT NOTES

1. Please refer to Lighting Design Concept Report for more information on the design intent.
2. Position of all lights to be confirmed on site prior to installation.
3. Refer to lighting consultant and supplier's manual for full details of installation.
   All recessed lights to be set in ceiling to ensure that the finished face is flush with the ceiling.
4. Lighting shown is indicative and designers may adjust lighting positions, fitting types and quantities to suit the requirements of the architectural intent.
5. Refer to overall landscape, hardscape and planting plans and elevations to avoid conflicts between all trades and confirm locations for any discrepancies. Where service trenches or lighting locations will coincide with trees, locations to be moved as far as possible to avoid root damage.
6. Exact location of lighting and lighting equipment controllers are indicative only. Please refer to architectural, electrical and consultant drawings for exact locations.
7. Recessed or concealed lighting to be installed by a licensed electrician and tested to ensure correct operation.
8. All outdoor lights are to be controlled by a photocell or timer switch.
9. Where dealing with electrical services, existing conditions and information can be unknown. Please refer to Electrical Engineers drawings for information, all digging must be done by hand to avoid damage to services, and take care not to damage or cut through any existing electrical cables.
10. Where retaining, existing walls, lights, power boxes, fences etc will need to be removed for service positioning.

W010		Wall light by Ascot
W011		Bathroom wall light by Ascot
W013		Picture light
W016		Reading light
W020		External FF&E wall light by Ascot
X050		Single 5A Socket
X051		Double 5A Socket

IMPORTANT NOTES

1. Please refer to lighting Design Concept Presentation for design intent.
2. Position of all lights to be from centre of fitting.
3. All low level wall lights (W001) set 100mm from FFL.
4. All uplights (U001/U002/U003) set 50mm away from the vertical face to the centre of the fitting.
5. Lighting plans show luminaire control groupings NOT wiring topologies. Wiring topologies and cable routes/cable entry points remain the responsibility of the electrical contractor.
6. Refer to coordinated architect/interior designer plans and elevations for exact setting out of all lighting and contact Xavio for any discrepancies. Please advise Xavio of any lighting clashes with joist/ceiling voids/wall voids/floor voids as soon as possible.
7. Downlights have been specified to fit within available voids & all downlights positions are subject to site survey of ceiling structures/voids. Please note driver void requirements may be deeper than downlight depth. Please see product datasheets for details. Downlight locations should be evaluated by electrical contractor during first fix and if insufficient space is available, then drivers should be positioned remotely.
8. Decorative lighting and Scenz lighting socket locations are indicative only. Please refer to Interior Designer's small power drawings for setting out of these items.
9. Linear lighting shown on Xavio layouts is INDICATIVE ONLY and must be read in conjunction with relevant Xavio lighting details and Architect's / Interior Designer's elevations and joinery details.
10. Drivers must be placed in ventilated and dry locations with easy access for maintenance. Exact locations to be co-ordinated between Xavio, M&E consultant, Architect and Joinery Contractor.
11. Driver quantities for each location can be found on the Xavio Loading Schedule.
12. Fittings marked with an 'EM' symbol must have emergency back up power or a battery. See Xavio datasheets for more information.
13. FF&E locations are indicative only. See Interior designer and AV consultant plans for setting out.
14. Lighting in plant rooms to be positioned on a wall to provide light in relevant working areas. This may not match exact setting out shown on plans.
15. All control by others - please refer to Xavio Loading Schedule for further details on dimming types required.
16. Mechanical ventilation is required for EXIT fibre optic perspex.
17. See Xavio CDP marked by CDP items to be designed by others.
